

CityZen

megaCITY - Zoom for the Environment

Collaborative Project

7th Framework Programme for Research and Technological Development

Cooperation, Theme 6:

Environment (including Climate Change)

Grant Agreement No.: 212095

Deliverable D4.2.1, type O

Publication on megacities impact on climate change by 2050

Due date of deliverable: project month 36

Actual submission date: project month 36

Start date of project: 1 September 2008

Duration: 36 months

Name of lead beneficiary for this deliverable:

FZJ

Scientist(s) responsible for this deliverable:

Martin Schultz

Project co-funded by the European Commission within the Seventh Framework Programme (2007-2013)		
Dissemination Level		
PU	Public	X
PP	Restricted to other programme participants (including the Commission Services)	
RE	Restricted to a group specified by the consortium (including the Commission Services)	
CO	Confidential, only for members of the consortium (including the Commission Services)	

Publication on megacities impact on climate change by 2050

A publication on the impact of megacities on climate change by 2050 has been submitted to the report series “Schriften des Forschungszentrums Jülich”, Reihe Energie & Umwelt / Energy & Environment Band / Volume 116, with the title “CITYZEN Climate Impact Studies”, edited by Martin Schultz, ISSN 1866-1793, ISBN 978-3-89336-729-0.

This publication collects three studies from the CITYZEN project with relevance to climate change. Each study has its own abstract and reference section. The table of contents is given below.

The report will appear in print and online at <http://www.zb.zb.kfa-juelich.de/publikationen/schriftreihe.asp?Schriftreihe=64> before the end of September 2011.

Table of Contents

1 Climate induced changes in air quality and chemical composition on different scales	7
1.1 Abstract	7
1.2 Changes in climate from 2000-2010 to 2040-2050 predicted by ECHAM5	7
1.3 Changes in anthropogenic emissions from 2005 to 2050	10
1.4 Changes in CO predicted by the OsloCTM2 model	12
1.5 Changes in ozone predicted by the OsloCTM2 model	14
1.6 References	16
2 Impact of emission changes on climate	17
2.1 Introduction	17
2.2 Trace gases and atmospheric chemistry	18
2.3 Aerosols	20
2.4 A note on statistics	21
2.5 Impacts of climate variability on air quality in Europe	23
2.6 ECHAM5-HAM sensitivity runs: How do aerosol emissions from megacities affect climate	30
2.7 Conclusions	35
2.8 Acknowledgements	36
2.9 References	36
3 Implications for mitigation strategies on air pollution under climate change	39
3.1 Abstract	39
3.2 Changes in climate from 2000-2010 to 2040-2050 predicted by ECHAM5	39
3.3 Emission scenarios for 2050	40
3.4 Implications for mitigation strategies on near-surface CO predicted by the OsloCTM2	43
3.5 Implications for mitigation strategies on daily max. near-surface ozone predicted by the Oslo CTM2 model	44
3.6 References	45
